

Python Programming Example 2

```
init_username=raw_input('Please enter initial username:')
init_password=raw_input('Please enter initial password:')
```

```
print (init_username)
print (init_password)
```

```
flag0=0
flag1=0
print('>>>User Login<<<')
```

```
while True:
```

```
    usr=raw_input('Enter username:')
```

```
    if usr==init_username:
```

```
        while flag0<3:
```

```
            password=raw_input('Enter password:')
```

```
            if password==init_password:
```

```
                print('Success login!')
```

```
                flag1=1
```

```
                break
```

```
            else:
```

```
                flag0 +=1
```

```
            if flag0<=2:
```

```
                print('Wrong password, enter again!')
```

```
        if flag1==1:
```

```
            break
```

```
        flag0=0
```

```
        print ('You have tried three times, login again!')
```

```
    else:
```

```
        print ('Wrong username, enter again!')
```

```
Please enter initial username:123
Please enter initial password:456
123
456
```

**Initialize the user
name and password.**

```
>>>User Login<<<
```

```
enter username:12
```

```
Wrong Username,enter again!
```

```
enter username:123
```

```
enter password:45
```

```
Wrong Password,enter again!
```

```
enter password:56
```

```
Wrong Password,enter again!
```

```
enter password:46
```

```
You have tried three times,login again!
```

```
enter username:123
```

```
enter password:456
```

```
Success Login!
```

**Wrong login
password.**

**Successfully logged
in.**
